

How to Download the NMHikes Mobile App

Instructions for Android Users:

1. Google uses **Google Firebase** to distribute apps to your phone.
2. All of the instructions can be executed on your phone.
3. After requesting the app, you will receive an invitation from **Google Firebase**. Normally this will happen within 24 hours, but if the admin is temporarily unavailable, it may take longer.
4. Open the link in the **Firebase** invitation and select “*Get Started*”.
5. You will be directed to a *Firebase App Distribution* page in your mobile browser.
6. Sign into this page using ANY of your Google accounts.
7. Select “*Accept Invitation*”.
8. Tap “*Download*”.
9. You will see a prompt to “*Allow installs from this source*” – tap to allow the install: this is a one-time requirement.

Future upgrade notifications:

1. After the initial install, any future upgrades to the app are automatically distributed via Firebase.
2. You will be notified and can then download the upgrade – no further Firebase processes are required.

NOTE:

For security purposes, all Android apps go through a rigorous vetting process before Google will allow distribution. The **Firebase** process insures the integrity and security of the app.
